PTOL-326 (Rev. 1-04)

Art Unit: 3651

#### **DETAILED ACTION**

#### Election/Restrictions

- 1. Applicant's election without traverse of Species III, Subspecies III, claims 1-6, 11-
- 3, 15, 18-21, 24-27 and 29 in the reply filed on 04/01/2005 is acknowledged.

## Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 3 and 4 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In regards to claim 3, the original disclosure, with respect to the elected invention, does not provide details to support the "energy" monitor module comprising a detecting device <u>integrated</u> with a chemical dispenser.

In regards to claim 4, the original disclosure, with respect to the elected invention, does not provide details to support the "energy" monitor module comprising a detecting device located at a location remotely from the first location.

Art Unit: 3651

## Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. The "energy" monitoring module comprises a detecting device integrated with a chemical dispenser must be shown or the feature canceled from claim 3.

The detecting device located remotely from the first location for "energy" consumption detection must be shown or the feature canceled from claim 4.

No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

# Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-6, 8, 10-13, 15, 18-21, 23-27, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Collins et al. 6,553,418.

Collins '418 discloses a system for remotely monitoring power consumption of plurality of locations. Each location is associated with a specific customer account. Each account is obviously distinguished by an account identifier. The system comprises a monitor module 18 for detecting power consumption at the first location. If the first location happens to be a cleaning facility, it is obvious that the power consumption of the first location relates to power usage by the cleaning system therein for performing cleaning processes. The system comprises a remote database communicatively networked to the monitor module and stores the account identifier in association with the power information (Figure 1). The database stores corporate data (utility cost) in association with the power usage information and the account identifier. The system comprises an analysis application remotely located from the first location for analyzing the power usage information in relation with the corporate data to characterize operations associated with cleaning system. The remote analysis application issues an alarm and a command to the first location upon detection of the desired data characteristic not being met. It is obvious that such alarm could be issued

Art Unit: 3651

to the first location. Collins '418 system comprises real time data and historical data for generating reports.

In regards to claims 8, and 21 Collins '418 system analyzes the power usage information and the corporate data against a target parameter specifying a desired data characteristic associated with power consumption by the first location. The analysis application identifies a situation wherein the desired data characteristic is not met.

In regards to claims 6, 11-13, 24-26 Collins '418 system comprises remote client computers 56. It is obvious that the remote analysis application could be installed on any type of computer remotely located from the first location, including the client computers 56, for analyzing the stored data within the database. Installing analysis application(s) onto remote computer(s) for analyzing collected data is commonly well known in the art. Since the operations of the first location is remotely monitored and controlled, it is obvious that any remote computer, including the client computers 56, could be configured to monitor and control the operations of the first location.

In regards to claim 29, it is obvious that if the first location were a cleaning facility, warewashing machines would be presented.

7. Claims 1-6, 11-3, 15, 18-21, 24-27 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroda et al. 5,777,895 in view of Collins et al. 6,553,418.

Kuroda '895 discloses a system for remotely monitor and control plurality of warewashing facilities. Each warewashing machine and facility is associated with an identifier for unique tracking thereof. However, Kuroda is silent as to the specifics of the remote monitoring and controlling of power consumption for the facilities.

Art Unit: 3651

Collins '418, along with paragraph 6 above, teaches that remote monitoring, analyzing, and controlling of power consumption provide cost-effective means to operate a business.

It would have been obvious for a person with ordinary skill in the art, at the time the invention was made, to have provided to Kuroda '895 with the additional system for monitoring, analyzing, and controlling of power consumption, per Collins '418, because it facilitates a cost-effective way to operate a business.
